OSMOSIS +SCULPT *the holistic approach to fat loss*

Contrary to popular belief fat cells are not our enemy. Recent research has shown fat cells are critical to overall health - meaning we do not want to destroy fat cells, only shrink them for inch loss. Osmosis +Sculpt utilizes a unique method of nano, pico and micro currents to reduce the size of fat cells by eliminating toxins, all while strengthening and engaging the muscle. Using this holistic approach, increased definition and tone are achieved in those resistant areas that hold onto fat. A healthy, contoured body awaits.

Proven research demonstrates microcurrent increases lipolysis and activates ATP pathways to tone and strengthen muscles, paired with our proprietary frequencies to amplify the results. In addition, we have patented technology that allows our nano and pico currents to effectively detox the fat. Osmosis +Sculpt proprietary wave technology reaches the fat layers and encourages the purging of toxins to reshape and contour.

How is Osmosis +Sculpt different? Many of the available treatment options for fat loss involve removing, burning or freezing fat, but as it turns out, one of the main reasons we gain weight is our fat takes on the burden of absorbing toxins from the system which causes them to get swollen. Osmosis +Sculpt triggers the cell to release trapped toxins resulting in shrinkage and inch loss. We believe this is the healthiest and most effective alternative for body sculpting available. Unlike wraps and other temporary treatments, we permanently remove the toxins, not just water loss. Osmosis +Sculpt eliminates toxins for inch loss and strengthens the muscles.

How long do the results last? Osmosis +Sculpt begins detoxing and toning in the first treatment with most people reporting more than an inch loss immediately. Based on our clinical trial and experience, we recommend 10 weekly treatments to reach your desired outcome. We approach the body holistically, and since we accumulate toxins in our fat cells over the span of our lifetime, we need to continuously work to achieve a healthy body.

Clinical Study

A two year trial comparison was conducted on **300 test subjects** at three different locations. Results from the clinical were as follows:

- **91%** of the test subjects were pleased with the results.
- **85%** of the test subjects tested averaged 6 inches loss measured in 3 locations after 1 series.
- **88%** of the subjects tested were pleased with the initial treatment.
- **78%** of the subjects tested retained for monthly maintenance.

Testimonials

"I decided to try Osmosis +Sculpt to prepare for a February cruise after a long winter. I had results after the first treatment and continued to see results after each visit. Inch loss, more toned and defined abdominal muscles, and a significantly smoother mid-back region (under the bra line). I was more at ease choosing a treatment that is holistic and non-invasive. I could definitely tell that there was a detoxifying effect happening. I am very happy with my results and would recommend it to anyone wanting a quick tone-up without the risks of other treatments."

— Barbara

"As a mother of two grown children who were delivered by C-section, I found that no matter what I did with diet or exercise, I could not get rid of the abdominal ridge above my scar. The Osmosis +Sculpt machine is the only thing that I have ever found that actually tightened the muscles and the surrounding skin. I saw a difference after one treatment with inch loss, so I signed up for a series of treatments and saw amazing, long lasting results. It was not uncomfortable or invasive whatsoever, and I would highly recommend it to anyone looking to improve specific areas or for all over body tightening the natural way. No lasers, no knives, no suction - just a machine that helps your own body do the work."
